

Free QA Checklist

One page for testing any web page. Tick each box as you go.

1. Login page

- ☐ Valid email and password logs in
- ☐ Wrong password shows a clear error
- ☐ Empty fields show a message, not a crash
- ☐ Email field rejects text without @
- ☐ Password is hidden, show/hide works
- ☐ Very long input does not break the layout
- ☐ Back button after login does not show the login form again

2. Smoke vs sanity

- ☐ Smoke: does the main flow still work? (open, main action, finish)
- ☐ Sanity: after a fix, does that exact change work?
- ☐ A passing sanity check does not mean the app is bug free

3. First-time user

- ☐ Clear saved data or use a private window
- ☐ Run the main flow as a brand new user
- ☐ Check required fields are really required

4. A useful bug report

- ☐ Short title: what is wrong, where
- ☐ Steps to reproduce, numbered
- ☐ Expected result
- ☐ Actual result
- ☐ Screenshot or screen recording
- ☐ Browser, device, and date

Tip: compare what the screen shows with the rule, not just whether a button works. Example: price Rs 200, quantity 2, expected total Rs 400.
